Gensokyo Harvest (working title)

Touhou doujin · farming × roguelite × rhythm combat · built in Unity

Game design dashboard · exported October 22, 2026

⛩ Overview

✦ The pitch

A small **Touhou Project** fan game where you tend a cozy farm in Gensokyo by day, Stardew Valley-style, and dive into **roguelite** runs where every fight follows the beat, like **Crypt of the NecroDancer**: grid-based moves, one action per beat. Inspiration and a similar in-development project: *Freaked Fleapit*.

🌾

Farming

Crops, seasons, day cycle, tools, selling and upgrading the farm.

0/18 features done

🥁

Rhythm combat

Grid moves on the beat, timing windows, enemy patterns synced to music.

0/12 features done

🎲

Roguelite

Procedural floors, run-based loot, meta-progression back on the farm.

0/5 features done

⛩

Touhou setting

Gensokyo locations, characters, music, and following fan-work guidelines.

0/6 features done

💝

Social & village

Gifts, affinity passives, traveling vendors and weekly events.

0/5 features done

✦ Similar projects

💃

Freaked Fleapit

A rhythm dungeon crawler + dating sim with roguelite progression. The closest existing game to your idea.

By **Finch Bird Studio** · published by **CRITICAL REFLEX** · Release: Coming soon · Demo available

Overall = (checked study items + done tasks) ÷ (all study items + all tasks).

📖 Story

✦ Premise

The player steps through one of **Yukari's boundaries** and ends up in Gensokyo, near the **Human Village**. By chance they meet **Marisa Kirisame**, who takes an interest in them and hands over a way to study magic (an artifact or a tome), charging them a hefty price for it.

The game starts at the **beginning of spring**, with a small plot of land for growing crops and selling vegetables.

✦ Setting

Gensokyo, just before the **Touhou 7 incident** (*Perfect Cherry Blossom*, the spring that never comes).

ZUN's source material is used lightly. The story is secondary to the gameplay.

✦ Characters

PLAYER

The Outsider

An outsider who stumbled through a boundary into Gensokyo. Learns farming, magic and combat from scratch.

MENTOR / CREDITOR

Marisa Kirisame

Ordinary magician. Takes an interest in the player, sells them the means to study magic at a steep price, and won't let them leave the plot until the debt is paid. Beating her ends the demo.

CAUSE OF THE CROSSING · FINAL TEST FIGHT

Yukari Yakumo

Youkai of boundaries. Her boundary is how the player got here. Mostly offscreen until the end: her final fight is a test of the player's worth before she'll consider sending them back to their world.

INCIDENT RESOLVER

Reimu Hakurei

Shrine maiden of the Hakurei Shrine. One of the trio who resolve the Perfect Cherry Blossom incident, beating Yukari alongside the player's final fight.

INCIDENT RESOLVER

Sakuya Izayoi

Head maid of the Scarlet Devil Mansion. Part of the trio (with Marisa and Reimu) who resolve the Perfect Cherry Blossom incident.

✦ Main arc / timeline

- ☐ Year one: 112 short days (four 28-day seasons), leading up to the Perfect Cherry Blossom incident.
- ☐ Arc 1 (prologue / debt arc): spring on the plot, under Marisa's rules.
- ☐ Partway into year one, it becomes clear the second spring won't come. Small urgency: reach Yukari for a way home.
- ☐ Final fight: Yukari tests the player's worth before she'll consider sending them back to their world.
- ☐ Beating Yukari beats the game. At the same time, Marisa, Reimu and Sakuya beat Yukari, so the PCB incident resolves (mostly offscreen).
- ☐ Spring proceeds normally. From year two onward, the player can keep playing freely.

✦ Demo scope

The demo runs until the player beats Marisa, or until the end of the first spring.

Funding & support

The game itself won't be crowdfunded. Any future support would go to the studio, or to an artist-support Patreon for the music and art, which is a separate project. Later: ask other Touhou fan-game devs whether they ran into problems.

📜 2024 fan-work guideline

✦ Arc 1: Prologue / debt arc

Marisa insists the player stays on the plot until they can fend for themselves and pay off the debt. This arc teaches the basics of farming and combat: fighting small invaders while the player gradually picks a combat style.

- ☐ **1.** Arrival: the player steps through one of Yukari's boundaries and wakes up near the Human Village.
- ☐ **2.** A chance meeting with Marisa, who takes an interest in the outsider.
- ☐ **3.** Marisa hands over the artifact/tome for studying magic, at a steep price. The debt begins.
- ☐ **4.** Beginning of spring: Marisa sets the rule. No leaving the plot until you can fend for yourself and the debt is paid.
- ☐ **5.** First seeds planted on the small plot (farming tutorial).
- ☐ **6.** First harvest sold at the Human Village.
- ☐ **7.** Small invaders attack the plot (combat tutorial).
- ☐ **8.** The player gradually chooses a combat style.
- ☐ **9.** Debt paid off and the player can fend for themselves: Marisa lets them leave the plot. End of the prologue.

✦ Marisa's debt

"I'll just borrow it until I die" doesn't work both ways, ze. The amounts are placeholders. Set your own.

Total debt	Paid so far	Currency
10000	0	yen

0 / 10,000 yen paid (0%). 10,000 yen to go.

✦ Open questions

Tick a question when it's decided.

What is the artifact/tome exactly? — Open

How do combat styles work, and how are they chosen? — Partly decided

> Partly decided: four style trees: Magic (auto-fire on beat), Faith (dance combos), Body (tank / graze), Youkai / Element (tentative, reflect danmaku). See the Combat tab. How they're chosen: TBD.

How big is the debt, and what are the payment milestones? — Open

~~Does the PCB incident (endless winter) hit at the end of year one and change farming?~~ — Decided

> Decided: yes. Year one is 112 short days (four 28-day seasons) leading up to the Perfect Cherry Blossom incident. Partway through, it becomes clear the second spring won't come, so the player heads for Yukari. Beating her ends the game, the incident resolves, and spring proceeds normally in year two. How the endless winter changes farming: TBD.

Which other characters appear? — Open

Player movement: grid hops everywhere, or free Stardew-style running on the farm? — Open

✦ Story notes

—

Saves automatically.

⚔ Combat

✦ Core rule

In combat areas, everything happens on a grid, moving on the beat like Crypt of the NecroDancer. The farm has free movement with no beat or music sync. Few bosses and a handful of important fights; most combat is normal area farming.

✦ Inspiration: Touhou Dystopian

Touhou Dystopian's character styles:

- Flandre: tanky, parry
- Marisa: ranged glass cannon
- Mokou: berserk, explosive
- Youmu: fast, balanced

✦ Movement & the beat

Farm: free movement, with no beat or music sync.
Combat areas: grid movement on the beat.

✦ Training area

A dummy or training enemy on or near the farm, where the beat becomes more evident. Used for practice and for latency calibration.

✦ 📹 Visuals & camera

Gameplay is drawn on a 3D plane with a fixed top-down camera. Characters and most props are 2D sprites, billboarded to face the camera, with 3D effects and particles on top. The grid stays pure logic (tile coordinates and beats). Rendering is a separate layer that only draws that logic.

✦ Fight camera options

How the camera behaves in fights. Option A is the safe default; B is worth a prototype.

A Fixed camera (Crypt of the NecroDancer style)

Recommended

The easiest route. The camera never rotates, so up on the keyboard is always up on screen, and warning tiles always read the same way.

B Corner boss + Q/E facing

Experiment

The boss moves between the corners of a square arena. The player turns their facing with Q and E while the third-person camera stays locked behind them.

C Free-rotating camera + Tab lock-on

Rejected for now

Input becomes confusing on a beat grid once the camera rotates freely. If it's ever used: rotate in 90° steps and keep input camera-relative (up = away from the camera), and don't move the camera on its own while a boss is spamming attacks.

TBD

✦ Enemy attacks

Most enemies telegraph: they mark tiles first, and the damage lands on a later beat. Starter code: the Combat/ scripts in unity-starter.zip (TelegraphManager, EnemyShooter, EnemyMelee, BossSpellCaster).

🎯 Ranged enemies

Shoot particles along a line or at specific tiles. Warning tiles show a beat countdown, and the damage is delayed: it lands on the matching beat if the player is still standing on that tile.

🐺 Melee enemies & wild beasts

Rush or shove themselves into the player. They step toward the player on the beat, with a one-beat wind-up tell before the hit.

🃏 Bosses: spell cards

More elaborate spell-card patterns: random attacks that hit many tiles of the board at the same time.

🔒 The player's rhythm

The player usually locks on to attack, and moves around when the boss is spamming skills.

✦ ⚠ Risks

Not technical, but worth watching.

Art cost of 3D arenas

3D fight areas plus pixel sprites plus effects is a lot of art for one person. Keep the arenas simple.

Telegraph readability

Warning tiles must be easy to read from every camera angle, or bosses will feel unfair. Keep them bright, flat and unlit, with a clear final-beat highlight.

✦ Fighting-style skill tree

Magic

Idea

Marisa-based

Forward ranged projectiles, fired automatically as the player moves on the beat.

—

Faith

Idea

Dance combos

Stronger, slower spells cast by movement combos, e.g. Up-Down-Up or Move-Move-Stay. Like casting enchantments by dancing.

—

Body

Idea

Tank / graze

Tanky. Rewards facing enemy projectiles or grazing: moving out of an attack one beat before it hits.

—

Youkai / Element

Idea

Tentative

The power to cast danmaku spells back at enemies.

—

✦ Faith combo list

Movement combos that cast Faith spells. Effects and costs are still TBD.

INPUTS	BEATS	EFFECT	COST
Up · Down · Up	3	*TBD*	*TBD*
Move · Move · Stay	3	*TBD*	*TBD*

🔁 Game loop

✦ Daily cycle

1 Wake up
Start of a short day.

→

2 Tend the farm
The village gives the player a big plot: remove herbs and wild shrubs, plow, plant, water, and care for livestock.

→

3 Go out
Head out to gain XP and better skills.

→

4 Back home / rest
Return home and rest until the next day.

↻ then the next day starts again at step 1

🍂 SEASON LAYER
Year one is 112 days: four 28-day seasons. Each season has an act boss to beat before the season ends. Urgency: prevent the eternal winter.

📅 WEEKLY LAYER
Weekly events introduce more characters and let the player interact with them.

✦ The eternal winter is a secret

Characters don't know the eternal winter is coming. It's only signaled through dialogue hints and the way the climate behaves.

✦ Climate & dialogue signals

Hints that spring is going wrong. Entries tagged `example` are placeholders; edit or delete them.

- ☐ `example` Late frosts keep hitting the fields well into spring.
- ☐ `example` The cherry trees are slow to bloom, and villagers remark on it.
- ☐ `example` A villager grumbles that the snow on the mountain isn't melting this year.

✦ Weekly events

One event per week that introduces a character or lets the player spend time with one.

Nothing here yet. Add the first weekly event below.

✦ Movement & the beat

Farm: free movement, with no beat or music sync. Combat areas: grid movement on the beat.

✦ Training area

A dummy or training enemy on or near the farm, where the beat becomes more evident. Used for practice and for latency calibration.

✦ Farm automation

Ways to free up time for adventuring. Click a name or description to edit.

Automatic irrigation

Idea

Waters crops without the daily chore.

Hire Cirno to feed livestock

Idea

Cirno takes over livestock feeding.

Cooking meals

Idea

Cooked meals sell for more and make better gifts.

Better farm tools (upgrades)

Idea

Upgraded tools make farm work faster.

🌾 Farming & economy

✦ Farming & economy

Crops are seasonal: each of the four 28-day seasons in the 112-day year has its own crop list. Harvests can be sold, cooked or gifted, and rice can also be brewed into sake. Traveling merchants turn this into a trade economy, winter adds big orders, and instead of a stamina bar there's a hunger meter.

✦ Crops by season

Filter by season with the chips. Every field is editable; sell value is still TBD.

SEASON	CROP	GROWTH DAYS	USES	SELL VALUE	NOTES
🌸 Spring	Rice	4	Sell, Cook, Sake	*TBD*	Sake: +4 days fermenting in a barrel (barrels take farm space). One of the simplest foods against hunger.
🌸 Spring	Bamboo shoots	5	Sell, Cook, Gift	*TBD*	—
🌸 Spring	Strawberries	6	Sell, Cook, Gift	*TBD*	—
🌸 Spring	Nanohana	6	Sell, Cook, Gift	*TBD*	—
🌸 Spring	Sayaendo (peas)	7	Sell, Cook, Gift	*TBD*	—
☀ Summer	Rice	4	Sell, Cook, Sake	*TBD*	Sake: +4 days fermenting in a barrel (barrels take farm space). One of the simplest foods against hunger.
☀ Summer	Strawberries	6	Sell, Cook, Gift	*TBD*	—
☀ Summer	Kabocha	9	Sell, Cook, Gift	*TBD*	For cooking meals (intentionally different from the autumn Pumpkin).
☀ Summer	Watermelon	9	Sell, Cook, Gift	*TBD*	—
☀ Summer	Edamame	6	Sell, Cook, Gift	*TBD*	—
🍁 Autumn	Rice	4	Sell, Cook, Sake	*TBD*	Sake: +4 days fermenting in a barrel (barrels take farm space). One of the simplest foods against hunger.
🍁 Autumn	Sweet Potato	8	Sell, Cook, Gift	*TBD*	—

SEASON	CROP	GROWTH DAYS	USES	SELL VALUE	NOTES
🍁 Autumn	Pumpkin	9	Sell, Cook, Gift	*TBD*	Halloween-style pumpkin for sweets and pie (intentionally different from Kabocha).
🍁 Autumn	Grapes	8	Sell, Cook, Gift	*TBD*	—
🍁 Autumn	Leeks	6	Sell, Cook, Gift	*TBD*	—
❄ Winter	Carrots	5	Sell, Cook, Gift	*TBD*	—
❄ Winter	Radishes (Daikon)	6	Sell, Cook, Gift	*TBD*	—
❄ Winter	Cabbage	8	Sell, Cook, Gift	*TBD*	—
❄ Winter	Turnips	6	Sell, Cook, Gift	*TBD*	—
❄ Winter	Leeks	6	Sell, Cook, Gift	*TBD*	—

OPEN QUESTIONS (NOT DECIDED)

- ☐ Sell price / value per crop (and per merchant) is still TBD.

✦ Traveling merchant trade

Traveling merchants bring foraged or premium goods and fruits, and are interested in buying sustainable farmed staples. Each merchant values goods differently, so trade becomes a value system players can learn and exploit for maximum profit.

What each merchant brings and what they want in return. Prices are TBD.

MERCHANT	BRINGS (FORAGED / PREMIUM)	WANTS (FARMED STAPLES)	NOTES
Sakuya	Cherries, Apples (from the Scarlet Devil Mansion)	Rice, Meat	—
Suika	Special berries, Peaches (forager)	Sake, Watermelons	—

✨ Winter big orders

During winter, some characters offer very good pay if the player fills a big order for them to use through the winter. These payouts usually go to big farm improvements or combat artifacts.

TBD

✨ Hunger meter (no stamina)

No Stardew-style stamina. Instead the player has a hunger meter, similar to Don't Starve, that runs down over time and is refilled by eating. This ties into cooking. Rice is one of the simplest foods to stave off hunger.

TBD

✨ 🍶 Sake barrels

Rice can be brewed into sake, but it takes 4 more days fermenting in a barrel, and barrels occupy a reasonable amount of farm space. So the rice-to-sake profit (e.g. selling to Suika) still costs work and space.

🗺️ World map

✦ One continuous world

Gensokyo is one continuous world with no screen jumps between areas, for the feeling of being lost in Gensokyo.

✦ Areas, left to right

⛩ boundary: wraps to farm ↩

AREA 1 · START
The farm
☑ 🔓 Unlocked
—

AREA 2
Name TBD
☐ 🔒 Locked
—

AREA 3
Name TBD
☐ 🔒 Locked
—

AREA 4
Name TBD
☐ 🔒 Locked
—

AREA 5
Name TBD
☐ 🔒 Locked
—

AREA 6
Name TBD
☐ 🔒 Locked
—

AREA 7
Name TBD
☐ 🔒 Locked
—

AREA 8
Name TBD
☐ 🔒 Locked
—

↩ Walking right from area 1 (The farm) into locked area 2 puts the player back on the LEFT side of area 1 (The farm).

✦ The boundary rule

If the player walks from an unlocked area into a locked one (e.g. area 2 → 3 while 3 is locked), they seamlessly reappear on the LEFT side of area 1 (the farm). This makes Yukari's boundary felt throughout the game and creates the sense that any step could lead somewhere dangerous.

✦ Implementation notes

- One continuous scene, or additive scene loading of neighbouring areas.
- Camera follow with a confiner.
- Seamless wrap: teleport the player AND the camera by the same offset, so the screen never visibly jumps.
- Make the right edge of area 2 and the left edge of area 1 look similar (e.g. matching forest) to hide the seam.
- Still works with the 3D plane + fixed top-down camera: move the player and the camera by the same offset in the same frame, and hide the jump with matching edges or a short blink/fog.

✦ Anomalies

The player should start to suspect something is off.

Glimpse of the Netherworld

TRIGGER

After defeating Marisa and unlocking the next fight area: one area transition.

WHAT THE PLAYER SEES

The transition briefly shows another area: the Netherworld (Hakugyokurou), with the great tree (Saigyou Ayakashi) in the background and Yukari hovering near it.

FREQUENCY

One-time

NOTES

On the next transition the anomaly never happens again.

Dislocated / shifting foliage

TRIGGER

Changing areas.

WHAT THE PLAYER SEES

2D foliage that seems moved or out of place between areas.

FREQUENCY

Repeatable

NOTES

Opens space for more hidden anomalies in the scenery and keeps constant doubt about whether something is off.

💝 Social

✦ Gifts & affinity

Inspired by Hades and Stardew Valley, and explicitly not a dating sim. Giving gifts raises a character's affinity, and affinity milestones unlock passives that help on the quest.

✦ Character affinity

Fill in as you design. Blank fields show TBD.

CHARACTER	LIKED GIFTS	DISLIKED GIFTS	PASSIVE UNLOCKS (MILESTONES)
Marisa	*TBD*	*TBD*	*TBD*
Reimu	*TBD*	*TBD*	*TBD*
Sakuya	*TBD*	*TBD*	*TBD*
Cirno	*TBD*	*TBD*	*TBD*
Yukari	*TBD*	*TBD*	*TBD*

✦ Traveling vendors

Characters who pass through the village selling trinkets and food.

CHARACTER	SELLS	SCHEDULE
Sakuya	Cherries, Apples (Scarlet Devil Mansion). Buys rice and meat.	*TBD*
Suika	Special berries, Peaches (foraged). Buys sake and watermelons.	*TBD*

🧺 Traveling merchants also trade: they bring foraged or premium goods and want farmed staples. See Farming & economy → Traveling merchant trade.

✦ Character voice blips

While dialogue text types out, each character "talks" with short digitized sounds like "Ah", "mmm", "Uhum", "Eh" and "Oooh". Each character gets their own pitch and speed, chosen to resemble their personality.

Pitch and speed per character are yours to set; blank fields show TBD.

CHARACTER	SOUNDS	PITCH	SPEED	PERSONALITY / FEEL
Marisa	*TBD*	*TBD*	*TBD*	*TBD*
Reimu	*TBD*	*TBD*	*TBD*	*TBD*
Sakuya	*TBD*	*TBD*	*TBD*	*TBD*
Suika	*TBD*	*TBD*	*TBD*	*TBD*
Cirno	*TBD*	*TBD*	*TBD*	*TBD*
Yukari	*TBD*	*TBD*	*TBD*	*TBD*

IMPLEMENTATION NOTES

- Play a short blip clip every N letters in DialogueManager's typewriter (skip spaces and punctuation).
- Per speaker (from the #speaker tag): pitch, speed (letters per blip), and a slight random pitch variation (e.g. ±0.05) so it doesn't sound robotic.
- One VoiceProfile ScriptableObject per character (clips, pitch, speed, variation); use a single AudioSource and AudioSource.pitch.
- Skipping or finishing the line instantly stops the blips.

🎵 Music

✦ Approach

A few Balatro-style remakes of ZUN songs (about 4, one per season / act / character). Each song gets rhythm variants: Night / resting (lullaby-ish), Farming & travelling (normal), and Battle (upbeat, synth and guitar).

✦ Soundtrack plan

0 of 12 tracks done · 0% (a sketch counts as half)

SEASON	SONG (ZUN ORIGINAL)	CHARACTER / ACT	🌙 NIGHT / RESTING	🌾 FARMING & TRAVEL	⚔ BATTLE
🌸 **Spring**	Marisa Stole the Precious Thing	Marisa	Not started	Not started	Not started
☀ **Summer**	Hong Meiling or Suika Ibuki theme (undecided)	Meiling / Suika (TBD)	Not started	Not started	Not started
🍁 **Autumn**	U.N. Owen Was Her?	Remilia / Flandre	Not started	Not started	Not started
❄ **Winter**	Necrofantasia	Yukari	Not started	Not started	Not started

✦ Credits & rules

- Credit ZUN and Team Shanghai Alice for every original composition.
- Label the game clearly as a Touhou Project fan work.
- Check the current 2024 guideline on arrangements, and on Patreon / crowdfunding: it says crowdfunding should basically be avoided, or Team Shanghai Alice contacted first.

Current guideline (2024, Japanese)

  Free · Pixel art and Aseprite video tutorials.

- [ ] **Free assets: itch.io / Kenney / OpenGameArt / Freesound** · Kenney · OpenGameArt · Freesound
  Free (check each license) · Placeholder sprites, UI, sound effects. Touhou's own game assets and music files are not allowed under the guidelines; make or commission your own.

🌸 Features

🌱 Cards marked starter are suggestions to get you going. Edit or delete them freely.

Idea 46

🥁 Rhythm combat starter
Beat conductor & timing windows
Central clock synced to AudioSettings.dspTime; Perfect/Good/Miss windows (e.g. ±50ms / ±120ms).

🥁 Rhythm combat starter
Grid movement on the beat
One tile per beat; off-beat input = miss/stumble. Optional beat indicator UI at the bottom.

🥁 Rhythm combat starter
Enemy patterns per beat
Each enemy type moves every N beats with a readable telegraph (fairies, youkai).

🌾 Farming starter
Crop growth & day cycle
Plant, water, grow by days; sleeping ends the day. Seasons later.

🌾 Farming starter
Inventory & hotbar
Stackable items, tools, seeds; shared between farm and dungeon.

🌾 Farming starter
Shop & selling
Sell crops at the village (Human Village?), buy seeds and upgrades.

🎲 Roguelite starter
Procedural dungeon floors
Room-based or cellular grid floors; stairs to descend, boss every few floors.

🎲 Roguelite starter
Meta-progression between runs
Run loot/currency brought home unlocks farm upgrades, new crops, characters.

⛩ Touhou setting starter
Character roster
Playable/NPC list: Reimu, Marisa, … with roles (shop, quest giver, boss).

⛩ Touhou setting starter
Fan-work guidelines check
Read and follow ZUN/Team Shanghai Alice's guidelines for doujin games before release.

🥁 Rhythm combat starter
Faith dance-combo input recognizer
Buffer the last N beat-inputs (incl. 'stay') and match them against the Faith combo list.

🥁 Rhythm combat starter
Graze-on-beat detection
Detect when the player leaves a tile one beat before an attack lands there; reward Body style.

🥁 Rhythm combat starter
Auto-fire on beat (Magic)
Fire a forward projectile automatically on each on-beat move.

🥁 Rhythm combat starter
Danmaku reflect (Youkai)
Turn incoming danmaku back at enemies (tentative Youkai / Element style).

🌾 Farming starter
112-day calendar & season music swap
Four 28-day seasons in year one; switch the season's song when the season changes.

⛩ Touhou setting starter
Adaptive music layers (night/farm/battle)
Crossfade or switch between the Night, Farm and Battle variants of the current song, kept on the same beat grid.

🌾 Farming starter
Day/night & daily schedule
Short days: wake up, farm, go out, rest. Clock and end-of-day handling.

🌾 Farming starter
Field clearing (weeds/shrubs)
Remove herbs and wild shrubs from the big plot before it can be farmed.

🌾 Farming starter

Plow/plant/water actions

Core tile actions on the farm grid.

🌾 Farming starter

Livestock care

Feed and look after animals; produce goods.

💝 Social & village starter

Gift & affinity system

Give gifts to raise affinity, with liked/disliked gifts per character.

💝 Social & village starter

Affinity passives

Affinity milestones unlock passives that help on the quest.

💝 Social & village starter

Traveling vendor schedule

Characters pass through the village selling trinkets and food on a schedule.

💝 Social & village starter

Weekly events calendar

One event per week that introduces or spotlights a character.

⛩ Touhou setting starter

Climate signals system

Weather and dialogue hints that spring is going wrong, escalating toward the eternal winter.

🌾 Farming starter

Cooking system

Cook meals for higher sale value and better gifts.

🌾 Farming starter

Auto-irrigation

Automatic watering for crop tiles.

🌾 Farming starter

Cirno livestock helper

Hire Cirno to feed the livestock.

🌾 Farming starter

Tool upgrades

Better farm tools that speed up farm work.

🥁 Rhythm combat starter

Training area & dummy

A dummy or training enemy on/near the farm where the beat is more evident. Practice and latency calibration.

🌾 Farming starter

Free movement on farm (no beat)

Free movement on the farm with no beat or music sync; switch to grid-on-beat in combat areas.

🎲 Roguelite starter

Continuous area streaming

World: one continuous scene or additive loading of neighbouring areas, with no screen jumps.

🎲 Roguelite starter

Boundary wrap to farm

World: walking into a locked area wraps the player to the left side of the farm. Teleport player and camera by the same offset.

🎲 Roguelite starter

Area unlock progression

World: unlock areas 2–8 over the course of the game.

⛩ Touhou setting starter

One-time transition anomalies

Area transitions that briefly show somewhere else (e.g. the Netherworld with Yukari), then never happen again.

⛩ Touhou setting starter

Shifting foliage between areas

2D foliage that seems moved or out of place when changing areas; room for more hidden scenery anomalies.

🌾 Farming starter

Crop growth system (seasonal crops)

Crop data (season, growth days, uses) as ScriptableObjects. Plant, water, grow by days; crops only grow in their season. 20 crops planned across four seasons (see Farming & economy).

🌾 Farming starter

Merchant trade & pricing

Each traveling merchant brings foraged/premium goods and wants farmed staples, with their own price table. Price differences are meant to be exploitable for profit.

🌾 Farming starter

Winter big orders

In winter, some characters place big orders with very good pay. Payouts fund big farm improvements or combat artifacts.

🌾 Farming starter

Hunger meter

No stamina. A Don't Starve-style hunger meter that drains over time; eating (and cooking) refills it.

💝 Social & village starter

Character voice blips

Short digitized talking sounds (Ah, mmm, Uhum, Eh, Oooh) during dialogue. Implementation: in DialogueManager's typewriter, play a short clip every N letters, with per-speaker pitch and speed plus slight random pitch variation.

🌾 Farming starter

Sake barrels (rice → sake)

Place a barrel, load rice, wait 4 more days of fermenting, collect sake. Barrels occupy a reasonable amount of farm space, so sake profit costs work and space.

🥁 Rhythm combat starter

Telegraphed attacks (warning tiles)

Enemy attacks mark tiles with a warning glow and a beat countdown. Damage lands on the impact beat if the player is still there. Starter code: TelegraphManager + AttackPattern.

🥁 Rhythm combat starter

Melee / beast enemies

Step toward the player on the beat (walls and other enemies block them), wind up for one beat as a tell, then lunge. Starter code: EnemyMelee.

🥁 Rhythm combat starter

Boss spell cards

A spell card is a set of attack patterns plus timing. The boss fires random patterns that cover many tiles at once and can hop between arena corners. Starter code: SpellCard + BossSpellCaster.

🥁 Rhythm combat starter

Fight camera decision

A: fixed camera like NecroDancer (recommended). B: boss on arena corners + Q/E facing with a locked third-person camera (experiment). C: free rotation + Tab lock-on (rejected for now).
